1. Project Overview

The Food Ordering & Delivery System is a web and mobile-based platform designed to simplify the process of ordering food from restaurants. The system enables customers to browse menus, place orders, make payments, and track deliveries efficiently.

The platform also supports restaurant management, delivery coordination, and order tracking to improve customer satisfaction and operational efficiency.

2. Business Problem

Traditional food ordering processes are time-consuming and inefficient. Customers face delays in placing orders and restaurants struggle with order management and delivery coordination.

The system aims to reduce manual work, improve order accuracy, and provide seamless customer experience.

3. Project Objectives

- Improve customer convenience in food ordering
- Enable online payments and order tracking
- Streamline restaurant order management
- Improve delivery coordination and communication
- Reduce order processing delays

4.Stakeholders

Stakeholder	Role
Customer	Places food orders
Restaurant Manager	Manages menu and orders
Delivery Rider	Delivers food
System Admin	Manages the platform

5.Functional Requirements

- User registration and login
- Restaurant and menu management
- Food ordering and cart management
- Online payment processing
- Order tracking functionality
- Delivery assignment management
- Feedback and rating system

6.Non-Functional Requirements

- Secure payment processing
- Fast response time
- User-friendly interface
- High system availability
- Data privacy and security

7. Expected Benefits

- Improved customer satisfaction
- Faster order processing
- Better delivery coordination
- Reduced manual errors
- Enhanced business efficiency

Food Ordering & Delivery System

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Dinu Sathsrani Ranasingha

1. Introduction

This document describes the software requirements for the Food Ordering & Delivery System. The system is designed to facilitate online food ordering, payment processing, restaurant management, and delivery tracking.

2. System Overview

The system allows customers to browse restaurant menus, place orders, make payments, and track deliveries. Restaurant managers can manage menu items and orders, while delivery riders handle deliveries.

3. Functional Requirements

- User Registration and Login
- Browse Restaurants and Menus
- Add Items to Cart
- Online Payment Processing
- Order Tracking
- Delivery Assignment
- Feedback and Ratings

4. Non-Functional Requirements

- Secure user authentication
- High system availability
- Fast response time
- Mobile-friendly interface
- Data privacy and security

5. System Features

- Real-time order tracking
- Restaurant menu management
- Online payment integration
- Delivery status updates

6. User Roles

Role	Responsibility
Customer	Places orders and tracks delivery
Restaurant Manager	Manages menus and orders
Delivery Rider	Delivers orders
Admin	Manages platform operations

7. Assumptions and Constraints

- Users must have internet access
- Online payment gateway availability is required
- Delivery services depend on rider availability

8. Conclusion

The Food Ordering & Delivery System aims to improve the efficiency of food ordering and delivery processes while enhancing customer experience through digital solutions.

SPRINT PLANNING DOCUMENT

Dinu Sathsarani Ranasingha

Sprint	Tasks	Priority	Duration
Sprint 1	Requirement Gathering & BRD	High	1 Week
Sprint 2	User Stories & SRS Documentation	High	1 Week
Sprint 3	Use Case & Activity Diagrams	Medium	1 Week
Sprint 4	UI Planning & Dashboard Concepts	Medium	1 Week
Sprint 5	Testing & Final Documentation	High	1 Week

The project follows an Agile-based sprint approach to organize project tasks and ensure incremental delivery of project artifacts and documentation.
