1. Project Overview

The Food Ordering & Delivery System is a web and mobile-based platform designed to simplify the process of ordering food from restaurants. The system enables customers to browse menus, place orders, make payments, and track deliveries efficiently.

The platform also supports restaurant management, delivery coordination, and order tracking to improve customer satisfaction and operational efficiency.

2. Business Problem

Traditional food ordering processes are time-consuming and inefficient. Customers face delays in placing orders and restaurants struggle with order management and delivery coordination.

The system aims to reduce manual work, improve order accuracy, and provide seamless customer experience.

3. Project Objectives

- Improve customer convenience in food ordering
- Enable online payments and order tracking
- Streamline restaurant order management
- Improve delivery coordination and communication
- Reduce order processing delays

4.Stakeholders

Stakeholder	Role
Customer	Places food orders
Restaurant Manager	Manages menu and orders
Delivery Rider	Delivers food
System Admin	Manages the platform

5.Functional Requirements

- User registration and login
- Restaurant and menu management
- Food ordering and cart management
- Online payment processing
- Order tracking functionality
- Delivery assignment management
- Feedback and rating system

6.Non-Functional Requirements

- Secure payment processing
- Fast response time
- User-friendly interface
- High system availability
- Data privacy and security

7. Expected Benefits

- Improved customer satisfaction
- Faster order processing
- Better delivery coordination
- Reduced manual errors
- Enhanced business efficiency
